EDUCATION

Maharshi Dayanand University

2023 - 2027

B.Tech in Computer Science & Engineering

New Delhi, India

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3
Frameworks	Next.js 15, React.js, Node.js, Express, Tailwind CSS, Shadcn/UI
Backend & Database	PostgreSQL, Prisma ORM, Redis, WebSockets (Socket.io)
Tools & DevOps	Git/GitHub, Stripe Connect, Chrome Manifest V3, Vercel

ENGINEERING PROJECTS

Void Youtube — Chrome Extension, JavaScript, DOM API

[Source Code](#)

- Engineered a productivity-focused browser extension using **Manifest V3** to intercept and modify the YouTube DOM, successfully blocking algorithmic distractions (Shorts, Recommendations).
- Implemented a custom content script to manipulate CSS variables and inject UI controls directly into the YouTube navbar, maintaining 60fps performance without layout shifts.
- Managed local state persistence and handling of dynamic page navigation (SPA) events within the browser environment.

LUMA Marketplace — Next.js 15, PostgreSQL, Prisma, Stripe

[Live Demo](#)

- Developed a full-stack course marketplace handling real-money transactions using **Stripe Connect** and Webhooks for secure enrollment verification.
- Designed a relational database schema (PostgreSQL) using **Prisma ORM** to handle complex relationships between instructors, courses, and student progress tracking.
- Implemented Role-Based Access Control (RBAC) via Clerk to separate Instructor dashboards from Student views.

Scalable Chat Infrastructure — Node.js, Redis, Socket.io

[Source Code](#)

- Architected a high-concurrency messaging backend utilising **WebSockets** (Socket.io) for bi-directional, real-time communication.
- Integrated **Redis** as a temporary message store and pub/sub layer to decouple chat processing from the primary database, reducing latency to <100ms.
- Built a decoupling layer between the React frontend and Node backend to handle connection drops and state re-hydration gracefully.

Cloudline (Weather 2.0) — React, TypeScript, Open-Meteo API

[Live Demo](#)

- Optimized frontend performance by reducing API calls through strategic state management and data caching.
- Built a responsive, glassmorphism-based UI that adapts dynamically to weather conditions using Tailwind CSS.

CERTIFICATIONS & INTERESTS

- Interests:** System Design, Browser Internals, Open Source Contribution.
- Hackathons:** Second Position at CodeSangam'24 Hackathon, organized by SGT University 2024
